KIT BY PASS 32/38MM

KIT BY PASS
32/38mm

With this By-Pass kit, connect your above ground pool heat pump to your swimming pool filtration system, on any filtration system from 32 to 38mm in diameter.

PRINCIPLE OF OPERATION:

To install your heat pump, it is essential to create a «bypass» on your installation. This is a bypass on your filtration backflow. The by-pass kit allows water to pass through your heat pump and adapt the flow rate through it.

Note: Ø38mm flexible hoses are not supplied with the By-pass kit.

The pro tip:

Install your bypass kit between your pump / filter assembly and your treatment system (electrolyser, chlorinator, etc.)

ADVANTAGES:

- **Optimizes the operation of the heat pump**
- **Allows the heat pump to be isolated while maintaining filtration.**

INCLUDED IN THE KIT

By-pass adaptable to 38mm diameter hydraulic circuit (flexible hoses)

1 valve
3-way tapped 1"
½ Diam. Ø50mm

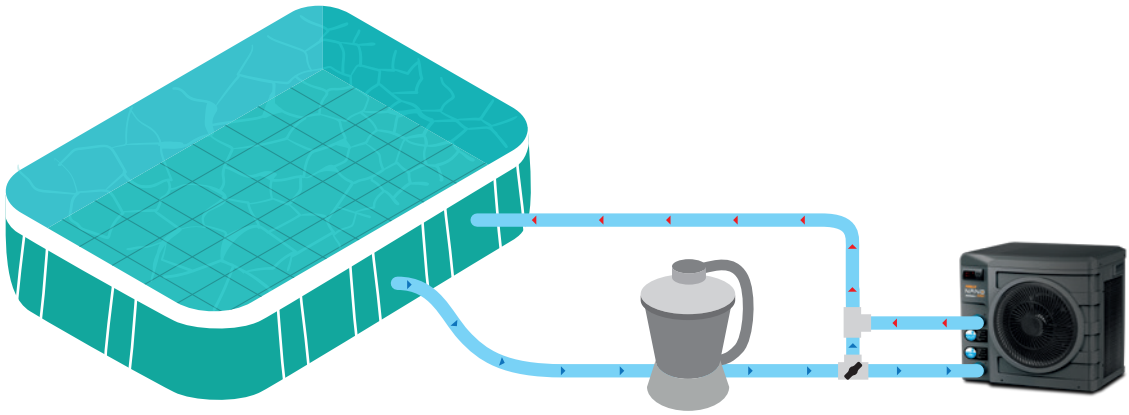

T-fitting Ø
32 / 38mm

3 Adapters for
Ø32 / 38mm hose

6 Necklaces
+ 1 Teflon Roller
